<b>Introduction</b>	<b>v</b>
<b>1 Background</b>	<b>1</b>
1.1 Functional analysis . . . . .	1
1.1.1 Weak topology . . . . .	1
1.1.1.1 The strong and weak topologies . . . . .	2
1.1.1.2 The weak* topology . . . . .	2
1.1.2 Hahn–Banach theorem . . . . .	3
1.1.3 Stone–Weierstrass theorem . . . . .	4
1.1.4 Banach–Steinhaus theorem . . . . .	5
1.1.5 Complex measures . . . . .	6
1.1.5.1 Definition . . . . .	6
1.1.5.2 Integration with respect to a complex measure	7
1.1.5.3 Variation of a complex measure and polar de-	
composition . . . . .	9
1.1.5.4 The space of complex measures . . . . .	9
1.1.5.5 Absolute continuity . . . . .	10
1.1.5.6 The Radon–Nikodým theorem and its conse-	
quences . . . . .	10
1.1.6 Riesz representation theorem . . . . .	11
1.1.6.1 The Hilbert space representation theorem . .	12
1.1.6.2 The representation theorem for linear func-	
tionals on $C_0(X)$ and $C_c(X)$ . . . . .	12
1.1.7 Geometry of Banach spaces . . . . .	14
1.2 Operator theory . . . . .	14
1.2.1 Basic definitions and spectral properties . . . . .	14
1.2.2 Wold decomposition of an isometry . . . . .	21
1.2.3 Riesz–Dunford functional calculus . . . . .	21
1.2.3.1 Definition . . . . .	22
1.2.3.2 Properties . . . . .	22
1.3 The Poisson kernel . . . . .	23

1.4	Hardy spaces . . . . .	24
1.4.1	Inner and outer functions . . . . .	26
1.4.2	Consequences of the inner–outer factorization . . . . .	29
1.4.3	The theorems of Beurling and Wiener . . . . .	31
1.4.4	The disc algebra . . . . .	32
1.4.5	Reproducing kernels, Riesz bases, and Carleson sequences . . . . .	32
1.4.6	Functions of bounded mean oscillation . . . . .	35
1.4.7	The Hilbert transform on the unit circle . . . . .	36
1.5	Number Theory . . . . .	37
<b>2</b>	<b>The operator-valued Poisson kernel and its applications</b>	<b>39</b>
2.1	The operator-valued Poisson kernel . . . . .	39
2.2	The $H^\infty$ functional calculus . . . . .	45
2.3	$H^\infty$ functional calculus in a complex Banach space . . . . .	48
2.4	Absolutely continuous elementary spectral measures . . . . .	53
<b>3</b>	<b>Properties <math>(\mathbb{A}_{n,m})</math> and factorization of integrable functions</b>	<b>59</b>
3.1	The basis of the S. Brown method . . . . .	59
3.1.1	The starting point . . . . .	59
3.1.2	The class $\mathbb{A}$ . . . . .	64
3.1.3	Classes $\mathbb{A}_{n,m}$ . . . . .	65
3.2	Factorization of log-integrable functions . . . . .	69
3.3	Applications in harmonic analysis . . . . .	84
3.4	Subnormal operators . . . . .	89
3.4.1	Borelian functional calculus for normal operators . . . . .	89
3.4.2	Invariant subspaces for subnormal operators . . . . .	91
3.5	Surjectivity of continuous bilinear mapping . . . . .	96
3.5.1	A sufficient condition for property $(\mathbb{A}_{\aleph_0})$ . . . . .	96
3.5.2	A sufficient condition for property $(\mathbb{A}_{1,\aleph_0})$ . . . . .	100
<b>4</b>	<b>Polynomially bounded operators with rich spectrum</b>	<b>107</b>
4.1	Apostol’s theorem . . . . .	107
4.2	$C^2(\mathbb{T})$ functional calculus and a Colojoară–Foiiaş theorem . . . . .	111
4.2.1	Operators with a $C^2(\mathbb{T})$ functional calculus . . . . .	111
4.2.2	The Colojoară–Foiiaş theorem . . . . .	114
4.3	Zenger’s theorem . . . . .	115
4.3.1	Zenger’s theorem and a factorization result . . . . .	116
4.3.2	A stronger version of Zenger’s theorem . . . . .	118
4.4	Carleson’s interpolation theorem . . . . .	122
4.5	Approximation using Apostol sets . . . . .	127
4.5.1	Approximation of integrable non-negative functions . . . . .	127

---

4.5.2	Approximate eigenvalues . . . . .	132
4.6	Invariant subspace results . . . . .	134
<b>5</b>	<b>Beurling algebras</b>	<b>145</b>
5.1	Properties of Beurling algebras . . . . .	146
5.2	Theorems of Wermer and Atzmon . . . . .	150
5.3	Bishop operators . . . . .	156
5.3.1	Davie's functional calculus . . . . .	156
5.3.2	The point spectrum . . . . .	160
5.4	Rational Bishop operators . . . . .	164
5.4.1	Cyclic vectors . . . . .	165
5.4.2	The lattice of invariant subspaces . . . . .	167
<b>6</b>	<b>Applications of a fixed-point theorem</b>	<b>173</b>
6.1	Operators commuting with compact operators . . . . .	174
6.2	Essentially self-adjoint operators . . . . .	175
6.2.1	Preliminaries . . . . .	176
6.2.2	Application to invariant subspaces . . . . .	181
<b>7</b>	<b>Minimal vectors</b>	<b>187</b>
7.1	The basic definitions . . . . .	187
7.2	Minimal vectors in Hilbert space . . . . .	189
7.3	A general extremal problem . . . . .	190
7.3.1	Approximation in Hilbert spaces . . . . .	191
7.3.2	Approximation in reflexive Banach spaces . . . . .	193
7.4	Application to hyperinvariant subspaces . . . . .	196
7.4.1	The main theorem . . . . .	196
7.4.2	Compact operators . . . . .	199
7.4.3	Weighted composition operators . . . . .	200
7.4.4	Weighted shifts . . . . .	208
7.4.5	Multiplication operators on $L^p$ spaces . . . . .	211
<b>8</b>	<b>Universal operators</b>	<b>217</b>
8.1	Construction of universal models . . . . .	217
8.2	Bilateral weighted shifts . . . . .	221
8.3	Composition operators . . . . .	224
8.3.1	Universality of composition operators . . . . .	224
8.3.2	Minimal subspaces and eigenfunctions . . . . .	228

<b>9</b>	<b>Moment sequences and binomial sums</b>	<b>237</b>
9.1	Moment sequences . . . . .	237
9.2	Operators on sequence spaces . . . . .	243
9.3	Binomial sums . . . . .	245
9.3.1	Proof of Theorem 9.3.1 . . . . .	246
9.3.2	A technical refinement . . . . .	249
9.3.3	Application to Banach algebras and invariant subspaces	253
<b>10</b>	<b>Positive and strictly-singular operators</b>	<b>259</b>
10.1	Ordered spaces and positive operators . . . . .	259
10.2	Invariant subspaces for positive operators . . . . .	261
10.3	Strictly singular operators . . . . .	267
	<b>Bibliography</b>	<b>273</b>
	<b>Index</b>	<b>291</b>
