

## MATH1050 : SOLUTIONS 5

1. (i)  $s_n = (2 - 4/n^3)/(3 + 6/n^2 + 1/n^3) \rightarrow 2/3$  since  $1/n \rightarrow 0$ .
- (ii)  $s_n = (2/n - 1/n^2)/(1 + 6/n^2) \rightarrow 0/1 = 0$ .
- (iii) Converges to zero by squeeze test ( $-1/n \leq s_n \leq 1/n$ ).
- (iv) Diverges to plus infinity.
- (v) Diverges.
- (vi) Converges to zero by squeeze test ( $0 \leq s_n \leq 2^{-n}$ ).
  
2. (a)  $\sum_{n=1}^{\infty} (1/n - 1/(n+1)) = 1$  as in lectures.
- (b)  $\sum_{n=1}^{\infty} (1/n - 1/(n+3))/3 = (1 + 1/2 + 1/3)/3 = 11/18$ .
- (c) G.P., sum is  $1/(e \cdot (1 - 1/e)) = 1/(e - 1)$  as in lectures.
- (d) G.P., ratio has modulus  $1/\sqrt{2} < 1$  so sum is convergent, to  $1/(2/(1+i) - 1) = (1+i)/(1-i) = i$ .
- (e) Sum of two complex GPs, converges to real part of  $e^{i\theta}/2 \cdot 1/(1 - e^{i\theta}/2)$ , which is  $2 \cos \theta / (5 - 4 \cos \theta)$ .
  
- (f) Sum of two complex GPs, converges to imaginary part of  $e^{i\theta}/4 \cdot 1/(1 - e^{i\theta}/4)$ , which is  $4 \sin \theta / (17 - 8 \cos \theta)$ .
  
3. (a) Converges by comparison with  $\sum 1/n^2$ .
- (b) Converges by ratio test.
- (c) Diverges since  $a_n$  doesn't tend to zero.
- (d) Converges by ratio test or by comparison with  $\sum 2^{-n}$  etc.
- (e) Converges by integral test.
- (f) Diverges by comparison with  $1/(n+1) \log(n+1)$  and integral test.
- (g) Diverges by comparison with  $1/n \log(n)^2$  and integral test.
- (h) Diverges since  $a_n$  doesn't tend to zero.
- (i) Converges by ratio test.
